PROFESSIONAL SUMMARY

IT professional with 2+ years of hands-on experience in Linux and cloud server administration, network troubleshooting (TCP/IP, DNS, DHCP), backup management, and infrastructure monitoring. Experienced in independently managing 80+ servers, resolving day-to-day system and connectivity issues, applying security patches, and coordinating with vendors to keep critical IT systems operational. Reliable, detail-oriented, and comfortable working on-site in a fast-paced environment.

TECHNICAL SKILLS

Server Administration: Linux (RHEL/CentOS/Ubuntu), Windows fundamentals, EC2 provisioning, user & access management, LVM

Networking: LAN/Wi-Fi troubleshooting, TCP/IP, DNS, DHCP, firewall/IPTables, NGINX reverse proxy, ping/traceroute/netstat/arp diagnostics

Backup & Monitoring: rsync/cp backups, Zabbix real-time monitoring, server health checks, uptime & performance monitoring

Security & Patching: OS patching, security updates, firewall configuration, access control

IT Operations: Ticket resolution (JIRA), documentation, vendor coordination, scheduled maintenance (Cron), weekend/on-call patching

Cloud & Automation: AWS (EC2, ECS, ECR), Docker, Kubernetes, GitHub Actions, GitLab CI/CD, Bash & Python scripting

PROFESSIONAL EXPERIENCE

DevOps Engineer | SNJ Global

Feb 2026 – Present

- Designed and maintained CI/CD pipelines for automated build and deployment.
- Support infrastructure reliability using AWS Cloud services (EC2, ECS, ECR) and Docker/Kubernetes container management.
- Monitor system and container health using **ctop** and **docker stats**, proactively identifying and resolving performance issues.
- Build and maintain **CI/CD pipelines** (GitHub Actions, GitLab) to improve deployment consistency and reduce downtime.
- Automated routine operational tasks using Bash/Python to improve efficiency and reduce manual intervention.
- Managed Git repositories, branching strategies, code integration, and deployment workflows across development environments.
- Applied security best practices including IAM, access control, secrets management, and secure infrastructure configurations.

System Administrator | AlnafiCloud

Feb 2025 – Jan 2025

- Delivered daily **Linux system administration** and technical troubleshooting support for servers, connectivity, and application performance issues.
- Created and managed **user accounts, groups, and permissions**, supporting employee onboarding and offboarding.
- Provisioned and configured new EC2 instances and Linux machines, including IP addressing, hostnames, and core services (DNS, Samba, Apache, SMTP).
- Performed and monitored regular **data backups** (rsync, cp) to safeguard business-critical data.
- Configured **firewall/IPTables** rules and an **NGINX** reverse proxy; monitored infrastructure in real time using **Zabbix**. Diagnosed and resolved **LAN/WAN connectivity** issues using ping, traceroute, netstat, ip, and arp.
- Applied **OS patches and security updates**, and scheduled recurring maintenance jobs via **Cron**.
- Coordinated **weekend server patching** and maintenance windows to minimize disruption to business operations.

EDUCATION

Bachelor in Information Technology — OTHM, UK

2022 – 2026

Intermediate — Government College of Technology

2018 – 2021
