

WAQAS ALI SHAH

Jr. DevOps Engineer | Cloud & Linux Systems

Massan Road, Keamari, Karachi | waqashankarachi2019@gmail.com | +92-304-2620412

 [Waqas Ali Shah](#)  [waqasqasid](#)

PROFESSIONAL SUMMARY

Jr. DevOps Engineer with hands-on experience managing 80+ servers, containerizing applications with Docker, and building CI/CD pipelines on GitHub Actions and GitLab. Skilled in AWS (ECS, ECR, EC2), Kubernetes, and Linux system administration, with a track record of reducing build times, cutting infrastructure costs, and improving application delivery speed. Seeking to contribute automation and cloud infrastructure expertise to a growing DevOps/Cloud team.

CORE SKILLS

Cloud & Containers: AWS (EC2, ECS, ECR), Docker, Kubernetes (Kind, Minikube), Docker Swarm

CI/CD & Automation: GitHub Actions, GitLab CI/CD, Bash scripting, Python scripting, Cron

Linux & Systems: Linux administration, DNS/Samba/Apache/SMTP servers, NGINX, LVM, YUM/RPM, firewall/IPTables

Monitoring & Tools: Zabbix, ctop, docker stats, GitHub, GitLab, JIRA

Networking & Security: TCP/IP troubleshooting (ping, traceroute, netstat, arp), firewall rule configuration

WORK EXPERIENCE

Jr. DevOps Engineer | Alnafi Cloud

Oct 2025 – Present

- Managed **80+ servers**, reducing manual deployment effort by **40%** through process improvements and automation.
- Containerized applications using **Docker**, writing Dockerfiles and building custom scripts integrated with **GitHub Actions CI/CD**, cutting build time by **60%**.
- Automated daily process, load, and disk-space monitoring using **shell scripting**.
- Deployed and managed applications on **AWS Cloud**, including **AWS ECS clusters**, using **Docker** and **Kubernetes**.
- Led a **Kubernetes implementation** project that improved application delivery time by **40%**, reduced infrastructure cost by **30%**, and increased scalability by **50%**.
- Built a **GitLab CI/CD pipeline** to automate build, test, and deployment of containerized applications to **AWS ECR**.
- Used **GitHub** and **GitLab** for version control, branching, and merge management.
- Monitored container metrics (CPU, memory, network) using **ctop** and **docker stats**.
- Configured **Docker volumes and networks** for data persistence and inter-container communication; automated recurring tasks with **Bash scripts**.
- Set up local **Kubernetes clusters** using **Kind** and **Minikube** for development and testing.

System Administrator | E-Sage Marketers

Feb 2024 – Sep 2025

- Managed daily Linux administration tasks, including **SFTP server** maintenance, package installation/updates, and system cleanup.
- Created and managed user accounts, groups, and permissions across Linux servers.
- Maintained **FTP** services and managed certificate updates between FTP and Linux servers.
- Automated client support tasks such as **MySQL backups** and high-memory alerts using **Bash and Python scripts**.
- Provisioned new **EC2 instances** and Linux machines, configuring IP addressing and hostnames.
- Configured and managed **DNS, Samba, Apache, and SMTP servers**.
- Installed packages using **YUM, RPM**, and source builds; created and modified **LVM partitions**.
- Performed data backups using **rsync** and **cp**; deployed a reverse proxy with an **NGINX** cluster.
- Configured **Zabbix** for real-time server monitoring and **firewall/IPTables** rules for incoming traffic.
- Scheduled recurring jobs via **Cron** and resolved daily **JIRA** tickets related to Linux and Python issues.
- Handled weekend server patching and maintenance, and archived data to the UAT path to resolve space issues.
- Verified network connectivity across LAN/WAN using **ping, traceroute, ip, netstat, and arp**.

PROJECTS

1. Expense Tracker Web Application (Flask)

🔗 GitHub: github.com/waqasqasid/expense-tracker-application

Built a production-ready personal finance web application using Flask, following the MVC pattern with Flask Blueprints, SQLAlchemy ORM, Flask-Migrate, Flask-Login, and Flask-WTF. Implemented income/expense tracking, category management, and an interactive dashboard with Chart.js visualizations, along with CSV/PDF report exports. Set up a CI/CD workflow using GitHub Actions and deployed the application to Vercel with a Bootstrap 5 responsive UI.

2. NestJS Application Containerization with Docker

🔗 GitHub: github.com/waqasqasid/NestJS-Application-Containerization-with-Docker

Developed a production-ready RESTful backend for a vegetables e-commerce platform using NestJS, TypeScript, PostgreSQL, and Prisma ORM, with JWT authentication, role-based authorization, cart, checkout, and order-lifecycle management. Fully containerized the application with a multi-stage Dockerfile and Docker Compose (API + PostgreSQL + Nginx), and documented all endpoints with Swagger/OpenAPI.

EDUCATION

Bachelor in Information Technology — OTHM, UK	2022 - 2026
Intermediate — Government College of Technology	2018 - 2021
Matriculation — The Citizen Foundation	2016 - 2018
